Understanding Clinical Neurotoxicology

Clinical neurotoxicology is a specialized field of medicine focusing on the diagnosis, management, and prevention of neurological disorders caused by exposure to toxic substances. These substances can range from heavy metals like lead and mercury (**heavy metal toxicity**) to pesticides, industrial chemicals, and even certain medications. The field critically considers the **environmental context** of exposure, recognizing that the setting – workplace, home, or community – plays a significant role in both exposure levels and the manifestation of symptoms. The book "Clinical Neurotoxicology Syndromes: Substances, Environments, and Expert Consult – Online and Print 1e" serves as an invaluable guide for navigating the complexities of this field.
