FAQ: Frequently Asked Questions about Panasonic Water Heaters

Q1: My Panasonic water heater isn't heating the water. What should I do?

A1: This could be due to several factors. First, ensure the power supply is connected correctly and the circuit breaker isn't tripped. Check the thermostat setting to make sure it's properly adjusted. If the problem persists, examine the heating element (if accessible) for damage or inspect the fuse or circuit breaker. Consult your **Panasonic water heater user manual** for specific troubleshooting steps or contact customer support.
